HELLO, EVERYONE. MY NAME IS AKIBA. I'M A DETECTIVE.
DID YOU EVER DO SOMETHING BAD AS A KID, AND THEN GET SCARED THAT THE POLICE WOULD COME AFTER YOU?
BUT, YOU KNOW... THERE'S SOMETHING ELSE THAT'S EVEN SCARIER THAN THE POLICE.
SURE... THAT HAPPENED TO ME, TOO.
BECAUSE GROWNUPS FIND THERE'S NO STATUTE OF LIMITATIONS FOR THOSE.
THAT'S THE STAB OF A GUILTY CONSCIENCE... AND THE GRUDGE HELD BY THE VICTIM.

ARE YOU IN ON THIS, TOO? TRYING TO DRIVE ME CRAZY?!
WALKED AWAY, EH...?
SURPRISINGLY, THAT MIGHT BE THE CASE.
WHAT ?!
MR. SERIZAWA, OBJECTS IN HUMAN SHAPE ARE EASY FOR GHOSTS TO ENTER.
IN ANCIENT TIMES, DOLLS WEREN'T TOYS, BUT WERE USED AS TOOLS TO SUMMON AND CONSOLE THE SPIRITS OF THE DEAD.
PERHAPS THE GIRL'S GHOST HAS ENTERED THE DOLL, AND HEADED OFF TO YOUR PLACE.

THERE'S ONE THING YOU MISUNDERSTAND, THOUGH. IT WASN'T THE DEAD GIRL'S FAMILY THAT ASKED ME TO BRING THE DOLL.

THERE WAS A STRANGE PERSON LIVING IN MY HOUSE.

BEFORE HE MARRIED ME, HE WAS STALKED BY A FORMER COWORKER NAMED OCHIAI.
MY HUSBAND WAS ON ASSIGNMENT IN ANOTHER PREFECTURE. I TOLD HIM ABOUT IT THE NEXT TIME ON THE PHONE. AND HE TOLD ME A STORY IN RETURN.
THAT'S WHEN I DECIDED TO HIRE A DETECTIVE.
SHE'D HOVER AROUND HIM OBSESSIVELY. SHE EVEN BROKE INTO HIS PLACE. MORE THAN ONCE.
HE HADN'T WANTED TO FRIGHTEN ME. BUT HE TOLD ME THAT OCHIAI HATED ME.
BUT AFTER I BECAME HIS WIFE, SHE QUIT THE COMPANY, AND SUDDENLY DISAPPEARED.

I'VE GOT A PRETTY GOOD GRASP ON WHAT YOU'VE TOLD ME. BUT THERE'S JUST ONE MORE THING, MA'AM.
THERE'S ANOTHER POSSIBILITY TO THIS SITUATION. SO PLEASE BE ON YOUR GUARD.
WELL, IT MEANS ...
...ANOTHER POSSIBILITY? MEANING WHAT?
I DIDN'T KNOW WHAT TO MAKE OF THE MAN. THEY SAID HE WAS SHARP, BUT HE EVEN FORGOT HIS COAT. AND WEEKS WENT BY, BUT I DIDN'T HEAR FROM HIM.

YOU SEE, I WAS HERE THREE YEARS AGO, WHEN THE WHOLE GHOST THING GOT STARTED.
HAVE YOU EVER HEARD OF PHANTOM PAIN? IT'S WHEN SOMEONE LOSES A LIMB...TO DISEASE, ACCIDENT, WAR...BUT SOMEHOW, THE SENSATION OF IT REMAINS.

IT WAS A LIVING GHOST, MS. MINEKURA.

GHOSTS ARE AS INDIVIDUAL AS THE PEOPLE THEY ONCE WERE. SOMETIMES A SPIRIT OF THE DEAD WILL RETAIN THE THINGS THEY LOST IN LIFE.
AND SOMETIMES... SOMETHING LOST IN LIFE WILL BECOME A GHOST ITSELF.

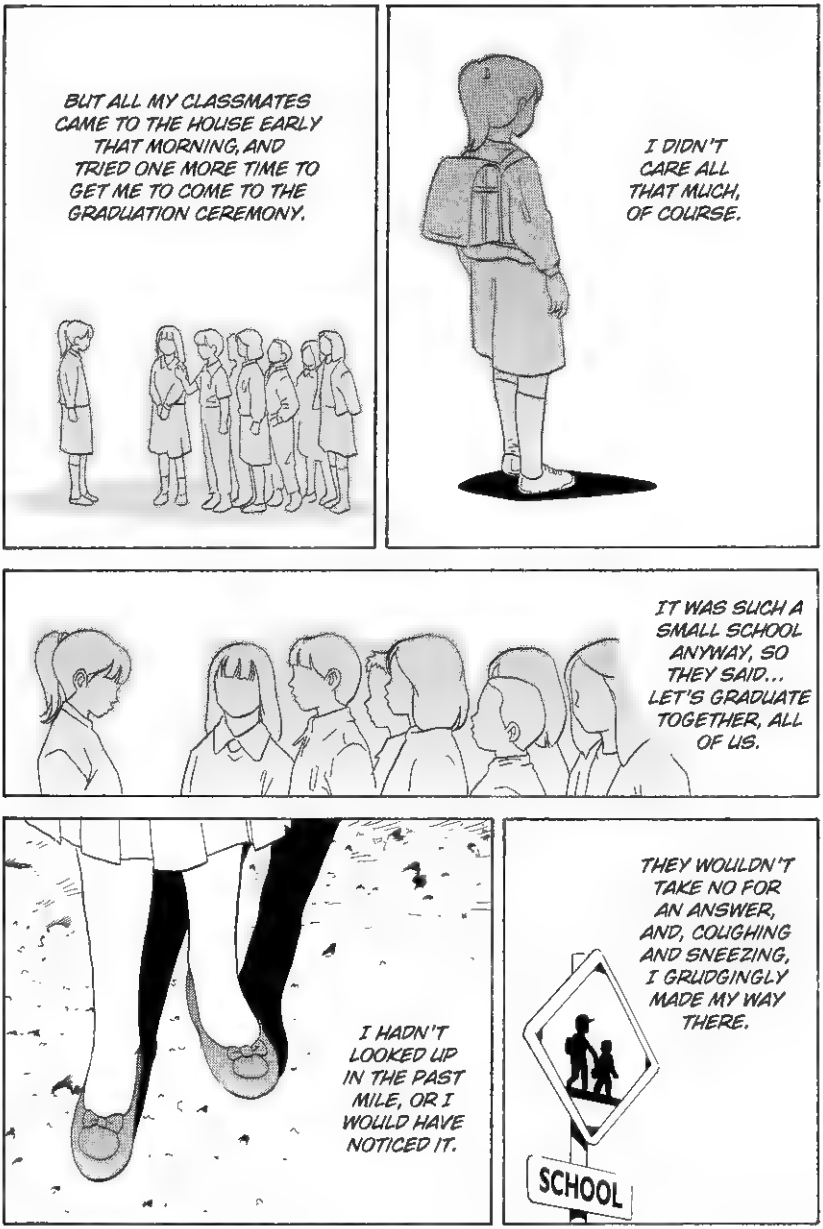
IT WAS ONLY FOR A LITTLE WHILE. MY PARENTS HAD DECIDED TO MOVE OUT TO THE COUNTRYSIDE... YOU KNOW, BETTER FOR THE KID.
I DIDN'T LIKE IT AT ALL. I DIDN'T LIKE THE OTHER CHILDREN. I USED TO FAKE BEING SICK ALL THE TIME, JUST SO I WOULDN'T HAVE TO GO TO SCHOOL.
BUT ON GRADUATION DAY, I HAD CAUGHT A BAD COLD FOR REAL, AND THOUGHT I COULDN'T ATTEND THE CEREMONY.



BUT ALL MY CLASSMATES CAME TO THE HOUSE EARLY THAT MORNING, AND TRIED ONE MORE TIME TO GET ME TO COME TO THE GRADUATION CEREMONY.
I DIDN'T CARE ALL THAT MUCH, OF COURSE.
IT WAS SUCH A SMALL SCHOOL ANYWAY, SO THEY SAID... LET'S GRADUATE TOGETHER, ALL OF US.
I HADN'T LOOKED UP IN THE PAST MILE, OR I WOULD HAVE NOTICED IT.
THEY WOULDN'T TAKE NO FOR AN ANSWER, AND, COUGHING AND SNEEZING, I GRUDGINGLY MADE MY WAY THERE.

She became a cause. Celebrities wrote her letters she couldn't read, and mothers sent her toys she couldn't play with.
There was even a series of paintings done of her as if she was only sleeping...as if she was a doll, dressed up in pretty clothes.

After she died, they all vanished except for this one. That's why it's so rare, he said.

DEAD LETTER OFFICE:

SOUND FX GLOSSARY AND NOTES ON *MAIL* VOL. 2

by Douglas Varenas

Introduction and additional comments by the editor

To increase your enjoyment of the distinctive Japanese visual style of this manga, we've included a guide to the sound effects (or "FX") used in this manga-style adaptation of the anime film. It is suggested the reader *not* constantly consult this glossary as they read through, but regard it as supplemental information, in the manner of footnotes. If you want to imagine it being read aloud by Osaka, after the manner of her lecture to Sakaki on hemorrhoids in episode five, please go right ahead. In either Yuki Matsuoka or Kira Vincent-Davis's voice—I like them both.

Japanese, like English, did not independently invent its own writing system, but instead borrowed and modified the system used by the then-dominant cultural power in their part of the world. We still call the letters we use to write English today the "Roman" alphabet, for the simple reason that about 1600 years ago the earliest English speakers, living on the frontier of the Roman Empire, began to use the same letters the Romans used to write their Latin language to write out English.

Around that very same time, on the other side of the planet, Japan, like England, was another example of an island civilization lying across the sea from a great empire, in this case, that of China. Likewise the Japanese borrowed from the Chinese writing system, which then as now consists of thousands of complex symbols—today in China officially referred to in the Roman alphabet as *hanzi*, but which the Japanese pronounce as *kanji*. For example, on the front cover of *Mail*, the four characters you see at the bottom left are examples of kanji, in this case, how the creator's name—Housui Yamazaki—is written in Japanese. Of course, all of these kanji were hanzi first; although the Japanese also later did invent some original kanji of their own, just as new hanzi have been created over the centuries as Chinese evolved.

Note that whereas both kanji and hanzi are methods of writing foreign words in Roman letters, the spelling "kanji" gives English readers a fairly good idea of how the Japanese word is really pronounced—*khan-gee*—whereas the spelling "hanzi" does not—in Mandarin Chinese it sounds something like *n-tsuh*. The reason is fairly simple: whereas the most commonly used method of writing Japanese in Roman letters, called the Hepburn system, was developed by a native English speaker, the most commonly used method of writing Chinese in Roman letters, called the *Pinyin* system, was developed by native Mandarin speakers. In fact Pinyin, by whose rules we get the spelling "hanzi," was developed to help teach Mandarin pronunciation to speakers of other Chinese dialects; unlike Hepburn, by whose rules we get the spelling "kanji," Pinyin was never intended as a learning tool for English-speakers *per se*, and hence has no particular obligation to "make sense" to English speakers or, indeed, users of the other languages spelled with the Roman alphabet.

Whereas the various dialects of Chinese are written entirely in hanzi, it is not practical to render the Japanese language entirely in them. To compare once more, English is a notoriously difficult language in which to spell properly, and this is in part because it uses an alphabet designed for another language, Latin, whose sounds are different (for example, the ancient Romans actually pronounced "Caesar" like "Keyser" from *The Usual Suspects*, and they said their "V" like our "W"—which might make you laugh until some gladiator runs a sword through your guts). The challenges the Japanese faced in using the Chinese writing system for their own language were even greater, for whereas spoken English and Latin are at least from a common language family, spoken Japanese, despite its geographical proximity, is unrelated to any of the various dialects of spoken Chinese. The

complicated writing system Japanese evolved represents an adjustment to these differences.

When the Japanese borrowed hanzi to become kanji, what they were getting was a way to write out (remember, they already had ways to *say*) their vocabulary. Nouns, verbs, many adjectives, the names of places and people—that's what kanji are used for, the fundamental data of the written language. The practical use and processing of that "data"—its grammar and pronunciation—is another matter entirely. Because spoken Japanese neither sounds nor functions like Chinese, the first work-around tried was a system called *manyogana*, where individual kanji were picked to represent certain syllables in Japanese (a similar method is still used in Chinese today to spell out foreign names).

The commentary in *Katsuya Terada's The Monkey King* (also available from Dark Horse) notes the importance that not only Chinese, but Indian culture had on Japan at this time in history—particularly, through Buddhism. It is believed the Northeast Indian *Siddham* script studied by Kukai (died 835 AD), founder of the Shingon sect of Japanese Buddhism, inspired him to create the solution for writing Japanese still used today. Kukai is credited with the idea of taking the manyogana and making shorthand versions of them now simply known as *kana*. The improvement in efficiency was dramatic—a kanji that had been used previously to represent a sound, that might have taken a dozen strokes to draw, was now reduced to three or four.

For example, look at the front cover of *Mail*, at the three characters in black right below the gun. These are kana, and, although somewhat pixilated by the Atari 2600 design style, you can see they're considerably simpler to write than the four kanji mentioned above. In fact, these kana spell out "MAIL" (literally they are ME-I-RU, the closest approximation Japanese sounds can make to our word *mail*) and therefore can be written in three characters instead of the four it takes in English.

Unlike the original kanji it was based on, the new kana had *only* a sound meaning. And unlike the thousands of kanji, there are only 46 kana, which, besides being useful to represent foreign words like *mail*, can also be used to spell out any word in the Japanese language, including the many ordinarily written with kanji (Japanese keyboards work on this principle). The same set of 46 kana is written two different ways depending on their intended use; cursive style, *hiragana*, and block style, *katakana*. The most important role kana play in Japanese is to indicate grammar such as subject and object identification, prepositions, verb conjugations, etc., but naturally, sound FX in manga are also almost always written out using kana.

As you can see from the example of "ME-I-RU" for *mail* above, kana works somewhat differently than the Roman alphabet. For example, while there are separate kana for each of the five vowels (the Japanese order is not A-E-I-O-U as in English, but A-I-U-E-O), there are, except for "n," no separate kana for consonants (the middle "n" in the word *ninja* illustrates this exception). Instead, kana work by grouping together consonants with vowels: for example, there are five kana for sounds starting with "k," depending on which vowel follows it—in Japanese vowel order, they go KA, KI, KU, KE, KO. The next set of kana begins with "s" sounds, so SA, SHI, SU, SE, SO, and so on. You will observe this kind of consonant-vowel pattern in the FX listings for *Mail* Vol. 2 below.

The block-style katakana are almost always the kind used for manga sound FX, but on occasion (often when the sound is one made by a person) hiragana are used instead. In *Mail* Vol. 2 you can see one of several examples on page 33, panel 4, as Mr. Serizawa screams out " UWAAAAA," which in hiragana style is written うわあああああ. Note its more cursive appearance compared to the other FX. If it had been written in katakana style, it would look like ウワアアアア.

To see how to use this glossary, take an example from page 5: "**5.2 FX: PO PO** [raindrops plopping]" 5.2 means the FX is the one on page 5, in panel 2. PO PO are the sounds these kana—ポツポツ—literally stand for. After the dash comes an explanation of what the sound represents. Note that in cases where there are two or more different sounds in a single panel, an extra number is

used to differentiate them from right to left; or, in cases where right and left are less clear, in clockwise order.

The use of kana in these FX also illustrates another aspect of written Japanese—its flexible reading order. For example, the way you're reading the pages and panels of this book in general: going from right-to-left, and from top to bottom—is the order in which Japanese is also written in most forms of print: books, magazines, and newspapers. However, if you examine those kana examples given above, you'll notice something interesting. Several of them read "Western" style—left-to-right! In fact, many of the FX in *Mail* (and manga in general) read left-to-right.

You can find another example of this flexibility on the front cover of *Mail* Vol. 2, which (in what is perhaps a Dark Horse first) is exactly the same as the original Japanese front cover. And on that cover, both the kana for "MAIL" and the kanji for creator Housui Yamazaki's name are written left-to-right (note the kanji version of the name, however, is written in the customary Japanese style of last name first; thus 山崎峰水 is "Yamazaki Housui") In other words, Japanese doesn't simply read "the other way" from English; the Japanese themselves are used to reading it in several different directions; left-to-right, for example, is also the more common way text is written on Japanese web pages.

As might be expected, some FX "sound" short, and others "sound" long. Manga represent this in different ways. One of many examples of "short sounds" in *Mail* Vol. 2 is to be found back in our first example, 5.2. Note the small ッ marks at the end of each. This is ordinarily the katakana for the sound "tsu," but its half-size use at the end of FX like this means the sound is the kind which stops or cuts off suddenly; that's why these sounds are written as PO PO and not POTSU POTSU—you don't "pronounce" the TSU in such cases.

There are three different ways you may see "long sounds"—where a vowel sound is extended—written out as FX. One is with an ellipsis, as in 9.3's JIWA... Another is with an extended line, as in 11.5's PINPOON. Still another is by simply repeating a vowel several times, as in 10.1's ZAAAAAA. As a visual element in manga, FX are an art rather than a science, and are used in a less rigorous fashion than kana are in standard written Japanese.

The explanation of what the sound represents may sometimes be surprising; but every culture "hears" sounds differently. Note that manga FX do not even necessarily represent literal sounds; for example 25.2.1's BIKU!—in manga this is the figurative "sound" of being startled. Such "mimetic" words, which represent an imagined sound, or even a state of mind, are called *gitaigo* in Japanese. Like the onomatopoeic *giseigo* (the words used to represent literal sounds—i.e., most FX in this glossary are classed as giseigo), they are also used in colloquial speech and writing. A Japanese, for example, might say that something bounced by saying PURIN, or talk about eating by saying MUGU MUGU. It's something like describing chatter in English by saying "yadda yadda yadda" instead.

One important last note: all these spelled-out kana vowels should be pronounced as they are in Japanese: "A" as *ah*, "I" as *eee*, "U" as *ooh*, "E" as *eh*, and "O" as *oh*.

45.1 It is not unusual in Japan for a husband and father to be transferred somewhere far away for an extended period, requiring him to leave his wife and kids behind. Readers will have noted the distant father image, juxtaposed with the all-caring mother, is itself not uncommon in Japanese pop culture.

79.3 Recently the editor attended the first MangaNEXT convention in Secaucus, NJ—the first attempt to establish a "manga from the ground up" event; you may have noticed that more cons have "anime" than "manga" in their names in North America, a reflection of the secondary status manga had in the U.S. market until recent years (the relationship in Japan, of course, has traditionally been the other way around). The convention hotel, the Crowne Plaza Meadowlands, was unusual for an American hotel in not attempting to conceal the fact it had a thirteenth floor—the button was there, right on the elevator panel. Most hotels and many office buildings, of course, seek to symbolically deny the presence of a 13th floor by calling it the fourteenth.

113.6 On the table is "Calpis Water," the famous Japanese soft drink whose name makes the English-speaking world snicker. It has a taste something like

vanilla yogurt, which is not surprising as it is in fact made with fermented dry milk (note that this fermentation, which breaks down lactose into lactic acid, makes it more digestible to those with lactose intolerance—not uncommon in East Asia). The "Water" refers to it being a watered-down, and hence ready to drink, version of Calpis concentrate—something like the way the Coke you get from a soda fountain is a watered version of a Coke syrup concentrate.

135.2 The actual reading should be *Kusatomura* rather than the *Kuzatomura* shown. *Sato* and *mura* both mean "village;" *Satomura*, with the same kanji, is an actual last name. Ku means nine, regarded as an unlucky number in Japanese—*Kusatomura* appears to be a ficticious town. Note the practice of including a Roman-alphabet reading of the kanji on the highway sign; another legacy of the disconnect between written and spoken Japanese.

159-161 The song of the ghosts is *Hotaru no Hikari*, "The Light of the Fireflies." Associated with school graduations in Japan, it is sung to the tune of *Auld Lang Syne*, the melody being borrowed by a teacher in the 1880s named Chikai Inagaki. Also sometimes played over PA systems in Japan to mark the closing times in stores, the first stanza in Japanese is:

Hotaru no hikari, mado no yuki.
Fumi yomu tsukihi, kasane tsutsu.
Itsushika toshi mo, sugi no towo.
Aketezo kesa ha, wakare yuku.

MANGA/HORROR

POSTCARDS FROM PURGATORY . . .

Broken dolls in pain that prey on people . . . babies who toddle forward with sharp scissors and laugh . . . elevators trapped amidst floors, as if caught between heaven and hell. All these and more are known to exorcist detective Reiji Akiba as messages to the living from the restless dead. But answer this mail at your own risk, unless you sign with a bullet from Akiba's sanctified gun!
